

### Description

The HXR8201 Trans-impedance Limiting Amplifier array is a member of IDT’s family of Optical Receiver Transmitter Array (ORTA) products targeted at the short-reach fiber optic links market. Together with a discrete pin detector array, high-capacity and high-availability optical links can be designed for Datacom and enterprise applications. This product is ideal for 25G fan-out module applications.

The 3.3V SiGe device integrates the trans-impedance pre-amplifier, the limiting post-amplifier, and a versatile CML output stage for a single, differential electrical channel.

### Features

- 60µApp receiver sensitivity for 10<sup>-12</sup> BER at 28Gbps
- Better than 2.4mApp overload
- 128mW per channel power consumption
- Adjustable output swing size, pre-emphasis, and signal detect threshold
- Independent, scalable RSSI output
- Optimized for isolated and common cathode photo-detector arrays from multiple vendors
- I<sup>2</sup>C compatible serial interface
- Suitable for TO can applications
- SFP28+ MSA compatible

### Typical Applications

- 28G Ethernet SR Fan-out modules
- 32G Fibre Channel modules
- InfiniBand EDR 25G Transceivers / AOC
- Proprietary multi-channel optical modules
