### ON Semiconductor®

## To learn more about ON Semiconductor, please visit our website at www.onsemi.com

Please note: As part of the Fairchild Semiconductor integration, some of the Fairchild orderable part numbers will need to change in order to meet ON Semiconductor's system requirements. Since the ON Semiconductor product management systems do not have the ability to manage part nomenclature that utilizes an underscore (\_), the underscore (\_) in the Fairchild part numbers will be changed to a dash (-). This document may contain device numbers with an underscore (\_). Please check the ON Semiconductor website to verify the updated device numbers. The most current and up-to-date ordering information can be found at <a href="www.onsemi.com">www.onsemi.com</a>. Please email any questions regarding the system integration to Fairchild <a href="guestions@onsemi.com">guestions@onsemi.com</a>.

Should Buyer purchase or use ON Semiconductor products for any such unintended or unauthorized application, Buyer shall indemnify and hold ON Semiconductor and its officer

#### **FXLH42245**

# Low-Voltage, Dual-Supply, 8-Bit, Signal Translator with Configurable Voltage Supplies, Bushold Data Inputs, 3-State Outputs and 26 $\Omega$ Series Resistors in the B-Port Outputs

#### **Features**

- Bi-Directional Interface between Two Levels from 1.1V to 3.6V
- Fully Configurable, Inputs Track V<sub>CC</sub> Level
- Non-Preferential Power-up; Either V<sub>CC</sub> May Be Powered-up First
- Outputs Remain in 3-State until Active V<sub>CC</sub> Level is Reached
- Outputs Switch to 3-State if Either V<sub>CC</sub> is at GND
- Bushold on Data Inputs Eliminates the need for External Pull-Up / Pull-Down Resistors
- 26W Output Series Resistors on the B Port to Reduce Line Noise
- Power-Off Protection
- Control Inputs (T/R, OE) Levels are Referenced To V<sub>CCA</sub> Voltage
- Packaged in 24-Pin MLP
- ESD Protection Exceeds:
  - 4kV Human Body Model (per JESD22-A114 & Mil Std 883e 3015.7)
  - 8kV Human Body Model I/O to GND (per JESD22-A114 & Mil Std 883e 3015.7)
  - 1kV Charge Device Model (per ESD STM 5.3)
  - 200V Machine Model (per JESD22-A115 & ESD STM5.2)

#### Description

The FXLH42245 is a configurable dual-voltage-supply translator designed for bi-directional voltage translation of signals between two voltage levels. The device allows translation between voltages as high as 3.6V to as low as 1.1V. The A port tracks the  $V_{\rm CCA}$  level and the B port tracks the  $V_{\rm CCB}$  level. Both ports are designed to accept supply voltage levels from 1.1V to 3.6V. This allows for bi-directional voltage translation over a variety of voltage levels: 1.2V, 1.5V, 1.8V, 2.5V, and 3.3V.

The device remains in 3-state until both  $V_{CC}s$  reach active levels, allowing either  $V_{CC}$  to be powered-up first. The device also contains power-down control circuits that place the device in 3-state if either  $V_{CC}$  is removed.

The Transmit/Receive  $(T/\overline{R})$  input determines the direction of data flow through the device. The  $\overline{OE}$  input, when HIGH, disables both the A and B ports by placing them in a 3-state condition. The FXLH42245 is designed with the control pins (T/R) and OE) supplied by  $V_{CCA}$ .

#### **Ordering Information**

#### **Absolute Maximum Ratings**

Stresses exceeding the absolute maximum ratings may damage the device. The device may not function or be operable above the recommended operating conditions and stressing the parts to these levels is not recommended. In addition, extended exposure to stresses above the recommended operating conditions may affect device reliability. The absolute maximum ratings are stress ratings only.

#### Note:

1. I/O absolute maximum ratings must be observed.

#### **Recommended Operating Conditions**

The Recommended Operating Conditions table defines the conditions for actual device operation. Recommended operating conditions are specified to ensure optimal performance to the datasheet specifications. Fairchild does not recommend exceeding them or designing to Absolute Maximum Ratings.

#### Notes:

- $V_{\text{CCI}}$  = the  $V_{\text{CC}}$  associated with the data input under test.  $V_{\text{CCO}}$  = the  $V_{\text{CC}}$  associated with the output under test.
- An external driver must source at least the specified current to switch LOW-to-HIGH.
- An external driver must source at least the specified current to switch HIGH-to-LOW.
- Don't care = any valid logic level. 7.
- Reflects current per supply, V<sub>CCA</sub> or V<sub>CCB</sub>.

#### Note:

12. For  $V_{MI}$   $V_{CCO}=V_{CCA}$  for control pins  $T/\overline{R}$  and  $\overline{OE}$  or  $V_{CCA}/2$ .

#### **Functional Description**

#### Power-Up/Power-Down Sequencing

FXL translators offer an advantage in that either  $V_{CC}$  may be powered up first. This benefit derives from the chip design. When either  $V_{CC}$  is at 0V, outputs are in a High-impedance state. The control inputs ( $T/\overline{R}$  and  $\overline{OE}$ ) are designed to track the  $V_{CCA}$  supply. A pull-up resistor tying  $\overline{OE}$  to  $V_{CCA}$  should be used to ensure that bus contention, excessive currents, or oscillations do not occur during power-up/power-down. The size of the pull-up resistor is based upon the current-sinking capability of the OE driver.

The recommended power-up sequence is:

- Apply power to either V<sub>CC</sub>.
- Apply power to the T/R input (logic HIGH for A-to-B operation; logic LOW for B-to-A operation) and to the respective data inputs (A port or B port). This may occur at the same time as step 1.
- 3. Apply power to the other V<sub>CC</sub>.
- 4. Drive the OE input LOW to enable the device.

The recommended power-down sequence is:

- 1. Drive OE input HIGH to disable the device.
- 2. Remove power from either V<sub>CC</sub>.
- 3. Remove power from the other  $V_{CC}$ .

#### **Physical Dimensions**

#### NOTES:

- A. CONFORMS TO JEDEC REGISTRATION MO-220, VARIATION WFSD-2 FOR DIMENSIONS ONLY. PIN NUMBERING DOES NOT COMPLY.
- B. DIMENSIONS ARE IN MILLIMETERS.
- C. DIMENSIONS AND TOLERANCES PER ASME Y14.5M, 1994

#### DISCLAIMER

FAIRCHILD SEMICONDUCTOR RESERVES THE RIGHT TO MAKE CHANGES WITHOUT FURTHER NOTICE TO ANY PRODUCTS HEREIN TO IMPROVE RELIABILITY, FUNCTION, OR DESIGN, FAIRCHILD DOES NOT ASSUME ANY LIABILITY ARISING OUT OF THE APPLICATION OR USE OF ANY PRODUCT OR CIRCUIT DESCRIBED HEREIN; NEITHER DOES IT CONVEY ANY LICENSE UNDER ITS PATENT RIGHTS, NOR THE RIGHTS OF OTHERS. THESE SPECIFICATIONS DO NOT EXPAND THE TERMS OF FAIRCHILD'S WORLDWIDE TERMS AND CONDITIONS, SPECIFICALLY THE WARRANTY THEREIN, WHICH COVERS THESE PRODUCTS

#### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF FAIRCHILD SEMICONDUCTOR CORPORATION.

#### As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury of the user
- 2. A critical component in any component of a life support, device, or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

#### ANTI-COUNTERFEITING POLICY

Fairchild Semiconductor Corporation's Anti-Counterfeiting Policy. Fairchild's Anti-Counterfeiting Policy is also stated on our external website, www.fairchildsemi.com, under Sales Support.

Counterfeiting of semiconductor parts is a growing problem in the industry. All manufacturers of semiconductor products are experiencing counterfeiting of their parts. Customers who inadvertently purchase counterfeit parts experience many problems such as loss of brand reputation, substandard performance, failed applications, and increased cost of production and manufacturing delays. Fairchild is taking strong measures to protect ourselves and our customers from the proliferation of counterfeit parts. Fairchild strongly encourages customers to purchase Fairchild parts either directly from Fairchild or from Authorized Fairchild Distributors who are listed by country on our web page cited above. Products customers buy either from Fairchild directly or from Authorized Fairchild Distributors are genuine parts, have full traceability, meet Fairchild's quality standards for handling and storage and provide access to Fairchild's full range of up-to-date technical and product information. Fairchild and our Authorized Distributors will stand behind all warranties and will appropriately address any warranty issues that may arise. Fairchild will not provide any warranty coverage or other assistance for parts bought from Unauthorized Sources. Fairchild is committed to combat this global problem and encourage our customers to do their part in stopping this practice by buying direct or from authorized distributors.

#### PRODUCT STATUS DEFINITIONS
