2-Output 1.8V PCIe Zero-Delay/Fanout Clock Buffer with Zo = 33Ohms

DATASHEET

Description

The 9DBV0231 is a member of Renesas' 1.8V Very-Low-Power (VLP) PCIe family. The device has 2 output enables for clock management.

Recommended Application

1.8V PCIe Gen1-5 Zero-Delay/Fan-out Buffer (ZDB/FOB)

Output Features

Two 1–200MHz Low-Power (LP) HCSL DIF pairs

Key Specifications

- DIF cycle-to-cycle jitter < 50ps
- DIF output-to-output skew < 50ps
- PCle Gen5 CC additive phase jitter < 40fs RMS
- 12kHz–20MHz additive phase jitter = 156fs RMS at 156.25MHz (typical)

Features/Benefits

- LP-HCSL outputs; save 4 resistors compared to standard HCSL outputs
- 35mW typical power consumption in PLL mode; reduced thermal concerns
- Spread Spectrum (SS) compatible; allows use of SS for EMI reduction
- OE# pins; support DIF power management
- HCSL compatible differential input; can be driven by common clock sources
- SMBus-selectable features; optimize signal integrity to application
 - Slew rate for each output
 - · Differential output amplitude
- Pin/software selectable PLL bandwidth and PLL Bypass; minimize phase jitter for each application
- Outputs blocked until PLL is locked; clean system start-up
- Device contains default configuration; SMBus interface not required for device control
- 3.3V tolerant SMBus interface works with legacy controllers
- Space saving 4 × 4mm 24-VFQFPN; minimal board space

Block Diagram

Pin Configuration

24-pin VFQFPN, 4x4 mm, 0.5mm pitch

^ prefix indicates internal 120KOhm pull up resistor ^v prefix indicates internal 120KOhm pull up AND pull down resistor (biased to VDD/2) v prefix indicates internal 120KOhm pull down resistor

Power Management Table

Differential Output Terminations

Rs	Zo	Units
33	100	Ohms
27	85	Offilis

Alternate Terminations

The 9DBV family can easily drive LVPECL, LVDS, and CML logic. See <u>"AN-891 Driving LVPECL, LVDS, and CML Logic with "Universal" Low-Power HCSL Outputs"</u> for details.

Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the 9DBV0231. These ratings, which are standard values for Renesas commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Fowerdown Current	I _{DDPD}	VDD, Outputs Low/Low		0.9	1.4	mA	1, 2

¹ Guaranteed by design and characterization, not 100% tested in production.

² Measured from differential waveform

³ Slew rate is measured through the Vswing voltage range centered around differential 0V. This results in a +/-150mV window around differential 0V.

⁴ Matching applies to rising edge rate for Clock and falling edge rate for Clock#. It is measured using a +/-75mV window centered on the average cross point where Clock rising meets Clock# falling. The median cross point is used to calculate the voltage thresholds the oscilloscope is to use for the edge rate calculations.

⁵ Vcross is defined as voltage where Clock = Clock# measured on a component test board and only applies to the differential rising edge (i.e. Clock rising and Clock# falling).

⁶ The total variation of all Vcross measurements in any particular system. Note that this is a subset of Vcross_min/max (Vcross absolute) allowed. The intent is to limit Vcross induced modulation by setting Δ-Vcross to be smaller than Vcross absolute.

⁷ At default SMBus settings.

² Input clock stopped.

Electrical Characteristics-Output Duty Cycle, Jitter, Skew and PLL Characteristics

Electrical Characteristics-Phase Jitter Parameters - 12kHz to 20MHz

T_{AMB} = over the specified operating range. Supply Voltages per normal operation conditions. See Test Loads for loading conditions.

Parameter	Symbol	Conditions	Minimum	Typical	Maximum	Specification Limit	Units	Notes
12k-20M Additive Phase Jitter,		Fan-out Buffer Mode,		156		n/o	fs	1 2 2
Fan-out Buffer Mode	¶ph12k-20MFOB	SSC OFF, 156.25MHz		150		n/a	(rms)	1, 2, 3

Notes:

² Measured from differential waveform

³ Duty cycle distortion is the difference in duty cycle between the output and the input clock when the device is operated in bypass mode.

⁴ All outputs at default slew rate

⁵ The MIN/TYP/MAX values of each BW setting track each other, i.e., Low BW MAX will never occur with Hi BW MIN.

^{1.} Applies to all differential outputs, guaranteed by design and characterization. See Test Loads for measurement setup details.

^{2. 12}kHz to 20M Hz brick wall filter.

^{3.} For RMS values additive jitter is calculated by solving for b where $[b = sqrt(c^2 - a^2)]$, a is rms input jitter and c is rms total jitter.

Electrical Characteristics-Additive PCIe Phase Jitter for Fanout Buffer Mode^[7]

Notes:

- 1. The Refclk jitter is measured after applying the filter functions found in PCI Express Base Specification 5.0, Revision 1.0. See the Test Loads section of the data sheet for the exact measurement setup. The total Ref Clk jitter limits for each data rate are listed for convenience. The worst case results for each data rate are summarized in this table. If oscilloscope data is used, equipment noise is removed from all results.
- 2. Jitter measurements shall be made with a capture of at least 100,000 clock cycles captured by a real-time oscilloscope (RTO) with a sample rate of 20 GS/s or greater. Broadband oscilloscope noise must be minimized in the measurement. The measured PP jitter is used (no extrapolation) for RTO measurements. Alternately Jitter measurements may be used with a Phase Noise Analyzer (PNA) extending (flat) and integrating and folding the frequency content up to an offset from the carrier frequency of at least 200 MHz (at 300 MHz absolute frequency) below the Nyquist frequency. For PNA measurements for the 2.5 GT/s data rate, the RMS jitter is converted to peak to peak jitter using a multiplication factor of 8.83. In the case where real-time oscilloscope and PNA measurements have both been done and produce different results the RTO result must be used.
- 3. SSC spurs from the fundamental and harmonics are removed up to a cutoff frequency of 2 MHz taking care to minimize removal of any non-SSC content.
- 4. Note that 0.7 ps RMS is to be used in channel simulations to account for additional noise in a real system.
- 5. Note that 0.25 ps RMS is to be used in channel simulations to account for additional noise in a real system.
- 6. The PCI Express Base Specification 5.0, Revision 1.0 provides the filters necessary to calculate SRIS jitter values, however, it does not provide specification limits, hence the n/a in the Limit column. SRIS values are informative only. In general, a clock operating in an SRIS system must be twice as good as a clock operating in a Common Clock system. For RMS values, twice as good is equivalent to dividing the CC value by $\sqrt{2}$. And additional consideration is the value for which to divide by $\sqrt{2}$. The conservative approach is to divide the ref clock jitter limit, and the case can be made for dividing the channel simulation values by $\sqrt{2}$, if the ref clock is close to the Tx clock input. An example for Gen4 is as follows. A "rule-of-thumb" SRIS limit would be either 0.5ps RMS/ $\sqrt{2}$ = 0.35ps RMS if the clock chip is far from the clock input, or 0.7ps RMS/ $\sqrt{2}$ = 0.5ps RMS if the clock chip is near the clock input.
- 7. Additive jitter for RMS values is calculated by solving for b where $b = \sqrt{(c^2 a^2)}$, and a is rms input jitter and c is rms output jitter.

Additive Phase Jitter Plot: 125M (12kHz to 20MHz)

General SMBus Serial Interface Information

How to Write

- · Controller (host) sends a start bit
- Controller (host) sends the write address
- Renesas clock will acknowledge
- Controller (host) sends the beginning byte location = N
- Renesas clock will acknowledge
- Controller (host) sends the byte count = X
- Renesas clock will acknowledge
- Controller (host) starts sending Byte N through Byte N+X-1
- Renesas clock will acknowledge each byte one at a time
- · Controller (host) sends a Stop bit

Revision History

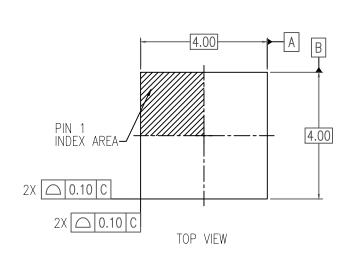

Revision Date	Description
August 13, 2012	Updated electrical characteristics tables.
August 13, 2012	2. Move to final.
	1. Changed VIH min. from 0.65*VDD to 0.75*VDD
	2. Changed VIL max. from 0.35*VDD to 0.25*VDD
September 16, 2014	3. Added missing mid-level input voltage spec (VIM) of 0.4*VDD to 0.6*VDD.
	4. Changed Shipping Packaging from "Trays" to "Tubes".
	5. Reformatted to new template
	Updated block diagram with new format showing individual outputs instead of bussed outputs.
	2. Updated pin out and pin descriptions to show ePad on package connected to ground.
April 3, 2015	3. Updated front page text to standard format for these devices. Added explicit bullet indicated Spread Spectrum
	compatibilty. Changed data sheet title, etc.
	4. Added additive phase jitter plot and updated phase jitter spec table.
	Replaced "Driving LVDS" with "Alternate Terminations", adding reference to AN-891.
August 10, 2015	Updated "Clock Input Parameters Table" correcting inconsistency with PCle SIG specifications.
August 10, 2015	3. Widened allowable input frequency at each PLL mode frequency.
	4. Updated NLG24 package drawing with actual package info instead of generic drawing.
November 5, 2015	 Minor typographical corrections throughout the data sheet Updated test load diagram to generic diagram. Length of test load listed outside the drawing. Minor updates to electrical tables for formatting. Removed Schmitt trigger info and output high/low voltage specifications for single-ended outputs, since this part does not have any. "Low-Power HCSL Outputs" table: corrected inversion of slew rate setting with specifications. Changed reference from 2 V/ns and 3 V/ns to slow setting and fast setting. Also change references in SMBus Bytes[3:2] "Low-Power HCSL Outputs" table: Removed Vswing parameter since this is an input parameter and is covered in "Clock Input Parameters" Table. Reduced current consumption limits. Minor updates to other electrical tables.
	1. Updated max frequency of 100MHz PLL mode to 140MHz
,	2. Updated max frequency of 125MHz PLL mode to 175MHz
	3. Updated max frequency of 50MHz PLL mode to 65MHz
July 30, 2021	Updated document title.
	2. Updated Recommended Applications.
	3. Updated Key Specifications.
	4. Updated Package Outline Drawings section.
	5. Updated Phase Jitter tables.

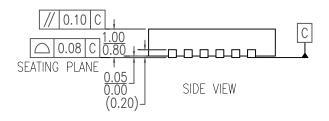

[&]quot;A" is the device revision designator (will not correlate with the datasheet revision).

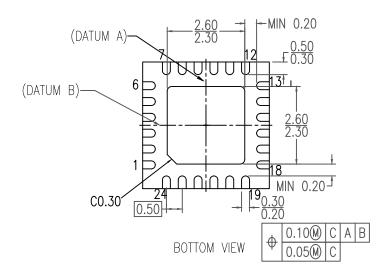

24-VFQFPN, Package Outline Drawing

4.0 x 4.0 x 0.90 mm Body,0.50mm Pitch,Epad 2.45 x 2.45 mm NLG24P1, PSC-4192-01, Rev 02, Page 1

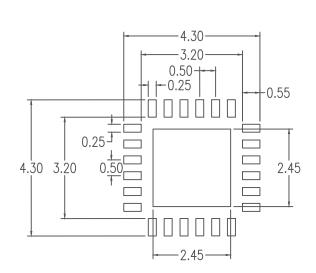

NOTES:

- 1. DIMENSIONING AND TOLERANCING CONFORME TO ASME Y14.5M-1994.
- 2. ALL DIMENSIONS ARE IN MILLIMETERS.

24-VFQFPN, Package Outline Drawing

4.0 x 4.0 x 0.90 mm Body,0.50mm Pitch,Epad 2.45 x 2.45 mm NLG24P1, PSC-4192-01, Rev 02, Page 2

RECOMMENDED LAND PATTERN DIMENSION

NOTES:

- 1. ALL DIMENSIONS ARE IN MM. ANGLES IN DEGREES.
 2. TOP DOWN VIEW, AS VIEWED ON PCB.
 3. LAND PATTERN RECOMMENDATION PER IPC-7351B GENERIC REQUIREMENT FOR SURFACE MOUNT DESIGN AND LAND PATTERN.

Package Revision History				
Date Created	Rev No.	Description		
Sept 9, 2016	Rev 01	Add Chamfer on Epad		
Sept 13, 2018	Rev 02	New Format, Recalculate Land Pattern Change QFN to VFQFF		

IMPORTANT NOTICE AND DISCLAIMER

RENESAS ELECTRONICS CORPORATION AND ITS SUBSIDIARIES ("RENESAS") PROVIDES TECHNICAL SPECIFICATIONS AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES "AS IS" AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for developers skilled in the art designing with Renesas products. You are solely responsible for (1) selecting the appropriate products for your application, (2) designing, validating, and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. Renesas grants you permission to use these resources only for development of an application that uses Renesas products. Other reproduction or use of these resources is strictly prohibited. No license is granted to any other Renesas intellectual property or to any third party intellectual property. Renesas disclaims responsibility for, and you will fully indemnify Renesas and its representatives against, any claims, damages, costs, losses, or liabilities arising out of your use of these resources. Renesas' products are provided only subject to Renesas' Terms and Conditions of Sale or other applicable terms agreed to in writing. No use of any Renesas resources expands or otherwise alters any applicable warranties or warranty disclaimers for these products.
