

Advance Information

SWITCHMODE™

Ultrafast "E" Series Power Rectifier

Plastic TO-220 Package

Features mesa epitaxial construction with glass passivation. Ideally suited high frequency switching power supplies; free wheeling diodes; polarity protection diodes; and inverters.

- 20 mJoules Avalanche Energy Guaranteed
- Ultrafast 50 Nanoseconds Recovery Time
- Stable, High Temperature, Glass Passivated Junction
- Monolithic Dual Die Construction.
May be Paralleled for High Current Output.

Mechanical Characteristics:

- Case: Molded Epoxy
- Epoxy meets UL94, V₀ at 1/8
- Weight: 1.9 grams (approximately)
- Finish: All External Surfaces Corrosion Resistant and Terminal Leads are Readily Solderable
- Maximum Temperature of 260°C / 10 Seconds for Soldering
- Shipped in 50 Units per Plastic Tube
- Marking: H8100E

MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Peak Repetitive Reverse Voltage Working Peak Reverse Voltage DC Blocking Voltage	V_{RRM} V_{RWM} V_R	1000	V
Average Rectified Forward Current (At Rated V_R , $T_C = 150^\circ\text{C}$)	I_O	4.0	A
Peak Repetitive Forward Current (At Rated V_R , Square Wave, 20 kHz, $T_C = 150^\circ\text{C}$)	I_{FRM}	8.0	A
Non-Repetitive Peak Surge Current (Surge applied at rated load conditions, halfwave, single phase, 60 Hz)	I_{FSM}	100	A
Storage / Operating Case Temperature	T_{stg} , T_C	-55 to +175	°C
Operating Junction Temperature	T_J	-55 to +175	°C

THERMAL CHARACTERISTICS

Thermal Resistance — Junction-to-Case	Per Leg	$R_{\theta JC}$	2.0	°C/W
---------------------------------------	---------	-----------------	-----	------

ELECTRICAL CHARACTERISTICS

Rating	Symbol	Value		Unit
Maximum Instantaneous Forward Voltage (1), see Figure 2 ($I_F = 4.0$ A) ($I_F = 8.0$ A)	V_F	$T_J = 25^\circ\text{C}$	$T_J = 100^\circ\text{C}$	V
		2.2	1.8	
		2.6	2.1	
Maximum Instantaneous Reverse Current, see Figure 4 ($V_R = 1000$ V) ($V_R = 500$ V)	I_R	$T_J = 25^\circ\text{C}$	$T_J = 100^\circ\text{C}$	μA
		10	100	
		4.0	55	

(1) Pulse Test: Pulse Width $\leq 250 \mu\text{s}$, Duty Cycle $\leq 2\%$.

Figure 9. Test Circuit

The unclamped inductive switching circuit shown in Figure 9 was used to demonstrate the controlled avalanche capability of the new “E” series Ultrafast rectifiers. A mercury switch was used instead of an electronic switch to simulate a noisy environment when the switch was being opened.

When S_1 is closed at t_0 the current in the inductor I_L ramps up linearly; and energy is stored in the coil. At t_1 the switch is opened and the voltage across the diode under test begins to rise rapidly, due to di/dt effects, when this induced voltage reaches the breakdown voltage of the diode, it is clamped at BV_{DUT} and the diode begins to conduct the full load current which now starts to decay linearly through the diode, and goes to zero at t_2 .

By solving the loop equation at the point in time when S_1 is opened; and calculating the energy that is transferred to the diode it can be shown that the total energy transferred is equal to the energy stored in the inductor plus a finite amount of energy from the V_{DD} power supply while the diode is in

Figure 10. Current–Voltage Waveforms

breakdown (from t_1 to t_2) minus any losses due to finite component resistances. Assuming the component resistive elements are small Equation (1) approximates the total energy transferred to the diode. It can be seen from this equation that if the V_{DD} voltage is low compared to the breakdown voltage of the device, the amount of energy contributed by the supply during breakdown is small and the total energy can be assumed to be nearly equal to the energy stored in the coil during the time when S_1 was closed, Equation (2).

The oscilloscope picture in Figure 11, shows the test circuit conducting a peak current of one ampere at a breakdown voltage of 1300 volts, and using Equation (2) the energy absorbed is approximately 20 mJoules.

Although it is not recommended to design for this condition, the new “E” series provides added protection against those unforeseen transient viruses that can produce unexplained random failures in unfriendly environments.

EQUATION (1):

$$W_{AVAL} \approx \frac{1}{2} L I_L^2 \left(\frac{BV_{DUT}}{BV_{DUT} - V_{DD}} \right)$$

EQUATION (2):

$$W_{AVAL} \approx \frac{1}{2} L I_L^2$$
