

GENERAL DESCRIPTION

This document describes the specifications for the IDTF1162 Zero-Distortion™ RF to IF Downconverting Mixer. This device is part of a series of mixers offered with high side or low side injection options for all UTRA bands. See the Part# Matrix for the details of all devices in this series.

The F1162 dual channel device is designed to operate with a single 5V supply. It is optimized for operation in a Multi-mode, Multi-carrier BaseStation Receiver for RF bands from 2300 - 2700 MHz with Low Side or High Side Injection. IF frequencies from 50 to 500 MHz are supported. Nominally, the device offers +43 dBm Output IP3 with 330 mA of I_{CC} . Alternately one can adjust 4 resistor values and a toggle pin to run the device in low current mode with +38 dBm Output IP3 and 230 mA of I_{CC} .

COMPETITIVE ADVANTAGE

In typical basestation receivers the RF to IF mixer dominates the linearity performance for the entire receive system. The Zero-Distortion™ family of mixers dramatically improve the maximum signal levels (IM_3 tones) that the BTS can withstand at a desired Signal to Noise Ratio (SNR.) Alternately, one can run the device in Low Current Mode to reduce Power consumption significantly. Zero-Distortion™ technology allows realization of either benefit.

- ✓ IP3₀: ↑ **11 dB** STD Mode, ↑ **5 dB** LC Mode
- ✓ Dissipation: ↓ **40%** LC, ↓ **15%** STD Mode
- ✓ Allows for higher RF gain improving **Sensitivity**

FEATURES

- Dual Path for Diversity Systems
- Ideal for Multi-Carrier Systems
- 8.9 dB Gain
- Ultra linear **+43 dBm IP3₀**
- Low NF < 10 dB
- 200 Ω output impedance
- Ultra high +13 dBm P1dB₁
- **Pin Compatible** w/existing solutions
- 6x6 36 pin package
- **Constant LO Port Z in STBY mode**
- < 200 nsec settling from Power Down
- Low Current Mode : **I_{CC} = 230 mA**
- Standard Mode: **I_{CC} = 330 mA**
- NOTE production BOM on p. 25

PINOUTS

Black Text denotes recommended external connection

Red Text denotes internal Function or Connection

- DB GND = Downbonded to Paddle
- Internal NC = Pin not connected

Please Note!

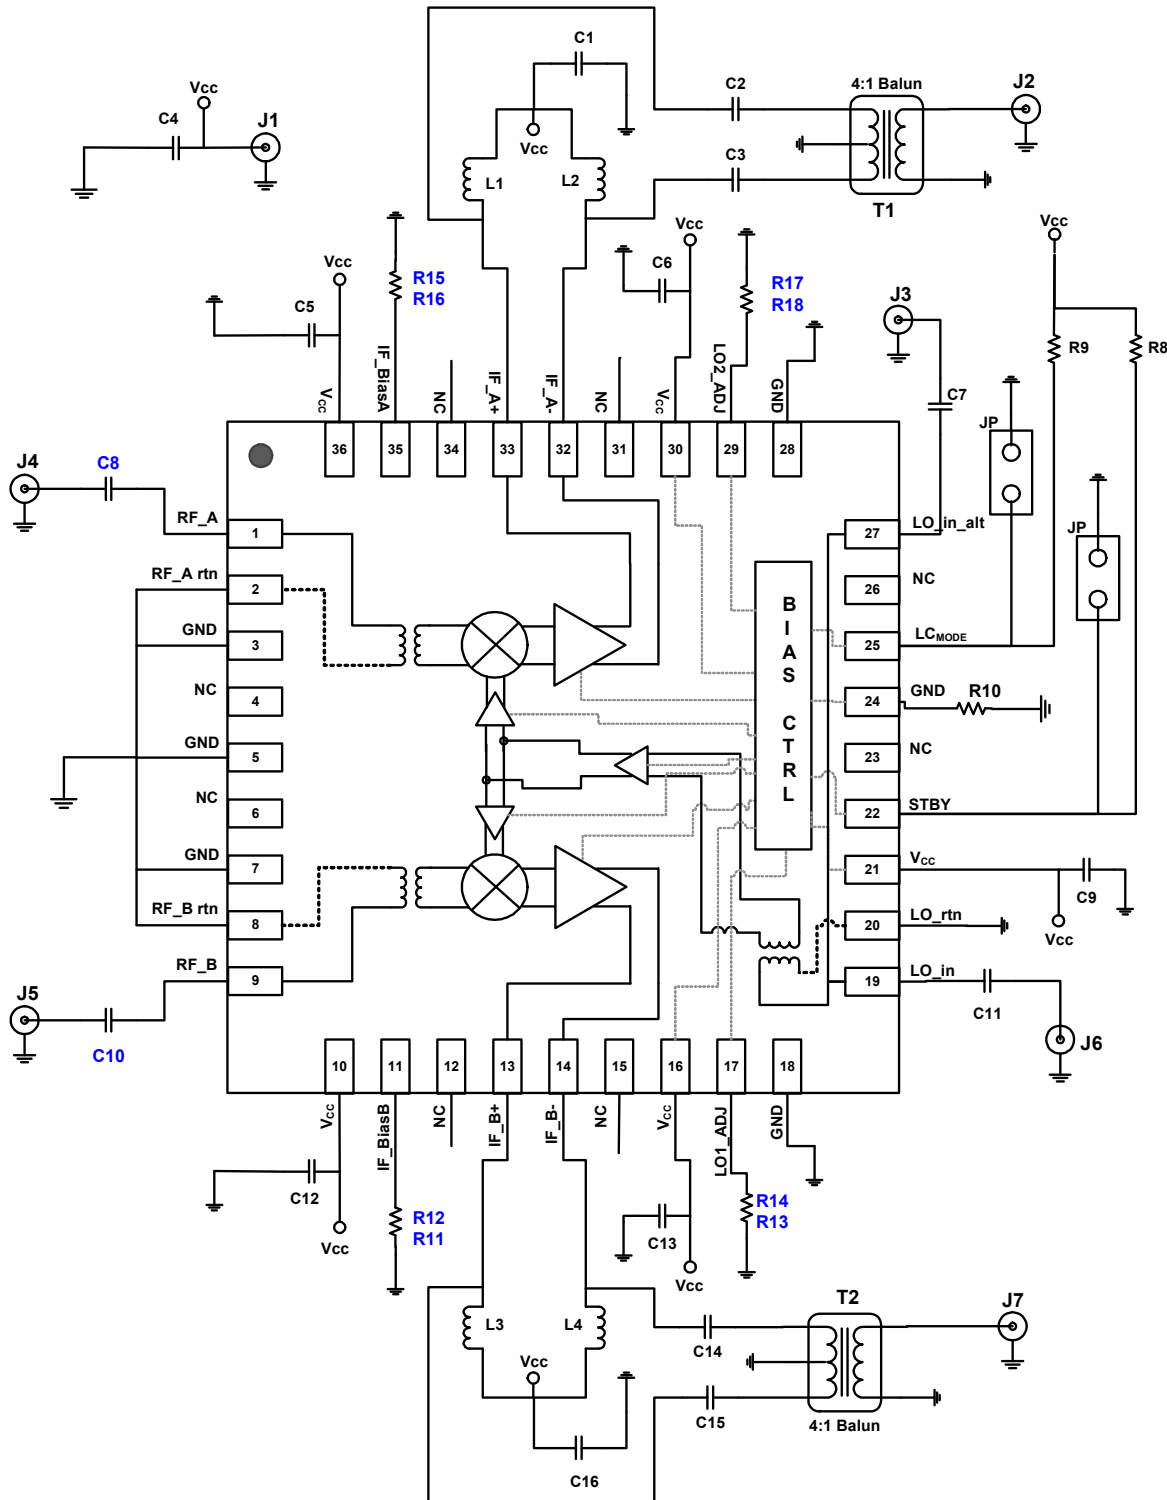

- Only connect to one LO feed
- Choose Either Pin 19 or Pin 27
- Do not connect the unused LO pin to ensure good LO return loss

PIN DESCRIPTIONS

Pin	Name	Function
1	RF_A	Main Channel RF Input. Internally matched to 50Ω. DO NOT apply DC to these pins
2, 8, 20	RF_Artn, RF_Brtn, LO_rtn	Transformer Ground Returns. Ground these pins.
3, 5, 7, 18, 24, 28	GND	Ground these pins.
4, 6, 12, 15, 31, 23, 26, 34	N.C.	No Connection. Not internally connected. OK to connect to Vcc. OK to connect to GND
10, 16, 21, 30, 36	VCC	Power Supply. Bypass to GND with capacitors shown in the Typical Application Circuit as close as possible to pin.
9	RF_B	Diversity Channel RF Input. Internally matched to 50Ω
11	IF_BiasB	Connect the specified resistor from this pin to ground to set the bias for the Diversity IF amplifier. This is NOT a current set resistor
13, 14	IFB+, IFB-	Diversity Mixer Differential IF Output. Connect pullup inductors from each of these pins to VCC (see the Typical Application Circuit).
17	LO1_ADJ	Connect the specified resistor for either Standard or LC mode from this pin to ground to set the LO common buffer Icc
19, 27	LO_in LO_in_alt	Local Oscillator Input. Connect the LO to this port through the recommended coupling capacitor. Note that you can only drive one LO port at a time. Remove the series capacitor from the unused port.
25	LC_MODE	Low Current Mode. Set this pin to low or ground for LC mode. Set to high or No-Connect for Standard mode. There is an internal pull-up resistor.
22	STBY	STBY Mode. Pull this pin high for Standby mode (~20 mA). Pull low or Ground for normal Operation
29	LO2_ADJ	Connect the specified resistor for either Standard or LC mode from this pin to ground to set the LO drive buffers Icc
32, 33	IFA-, IFA+	Main Mixer Differential IF Output. Connect pullup inductors from each of these pins to VCC (see the Typical Application Circuit).
35	IF_BiasA	Connect the specified resistor from this pin to ground to set the bias for the Main IF amplifier. This is NOT a current set resistor
	— EP	Exposed Pad. Internally connected to GND. Solder this exposed pad to a PCB pad that uses multiple ground vias to provide heat transfer out of the device into the PCB ground planes. These multiple via grounds are also required to achieve the noted RF performance.

EVkit Modifications for High Side Injection Low Current Mode (see TOCs on pages 15 – 17)

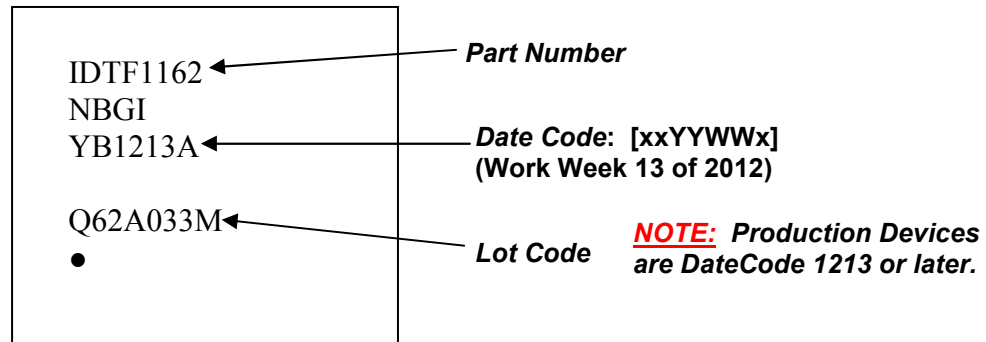

- Change C8 and C10 from 39 pF to 4.7 pF
- ↓
- Change C11 from 4.7 pF to 3 pF
- ↓
- Set these 3 Dual Jumpers as shown to INNER position and CLOSE LC_{MODE} Jumper
- ↓
- Set R14/R13 Jumper to OUTER position
- ↓
- Will select 91 ohm resistor for pin17 instead of 180 ohm. All other resistors will be selected for Mode = Low Current
