

DESCRIPTION

This document describes the specifications for the F0552 1710MHz to 2050MHz dual path Sampling Intermediate Frequency (SIF) Receiver ideal for Multi-mode, Multi-carrier BaseStation Receivers. Refer to the Part # Matrix below describing the frequency coverage of the complete series. This series of devices covers all UTRA bands up to 2.7GHz and offers significantly better Noise and Distortion performance than currently available solutions. IF frequencies up to 450 MHz are supported.

The F0552 SIF provides 29dB gain and offers 47dB gain adjustment in 1dB steps designed to operate with a single 5V supply. Nominally, the device offers +45 dBm Output IP3 using 450mA of I_{CC}. Alternately one can configure the device in low current (LC) mode to reduce power consumption to < 1.9 Watts.

This device is packaged in a 10 x 10 mm 68-pin Thin QFN with 50 ohm single-ended RF input and 200 ohm differential IF output impedances for ease of integration into the receiver lineup. The EvKit is configured to match the 200 ohm differential IF output to 100 ohms differential for a broad range of IF center frequencies per the application drawings.

COMPETITIVE ADVANTAGE

Renesas' Zero-Distortion™ mixer in combination with interstage filtering and Renesas' proprietary FlatNoise™ DVGA improves system SNR to the point where the external SAW filter can be eliminated. Both IP_{3O} and NF are kept virtually flat while gain is backed off, enhancing SNR significantly under high level interferer conditions, and greatly benefiting 2G/3G/4G Multi-Carrier IF sampling receivers. In addition, total power consumption is reduced by ~35% compared to conventional solutions.

- ✓ No external SAW is needed
- ✓ Reduced Power Consumption by 35%
- ✓ NF and OIP3 virtually flat for first 17 dB gain reduction

The fast-settling, parallel mode gain step of 1.0dB coupled with the excellent differential non-linearity allow for SNR to be maximized further by targeting the minimum necessary gain in small, accurate increments. The matched output does not require a terminating resistor, thus the gain and distortion performance are preserved when driving Bandpass Anti-Alias filters.

FEATURES

- Dual Channel for Diversity / MIMO Systems
- Combines FlatNoise™ and Zero-Distortion™ technology
- 29dB Total Power Gain
- 47dB gain control range
- 1 dB Gain Steps
- Ultra linear +45dBm IP_{3O}
- Low NF: 9.6dB at G_{MAX}
- 50Ω input impedance
- Matched to 100Ω differential output impedance
- Ultra high +19.8dBm P1dB_O
- Independent channel standby mode
- Constant LO impedance in STBY mode
- 6-bit parallel control
- 60MHz to 450MHz IF frequency range
- Excellent 2x2, 3x3, IM2, 2nd Harmonic Rejection
- I_{CC} = 450mA STD Mode, 375mA LC Mode
- 10 x 10 mm 68-pin VFQFPN package

Specification Notes:

- 1 – Items in min/max columns in ***bold italics*** are confirmed by Test using BOM1 components supporting 4:1 output impedance transformation to 50 ohms.
- 2 – All other Items in min/max columns are confirmed by Design Characterization using BOM2 components supporting 2:1 output impedance transformation to 100 ohms.
- 3 – Matching network changed for 276MHz IF per BOM table values.

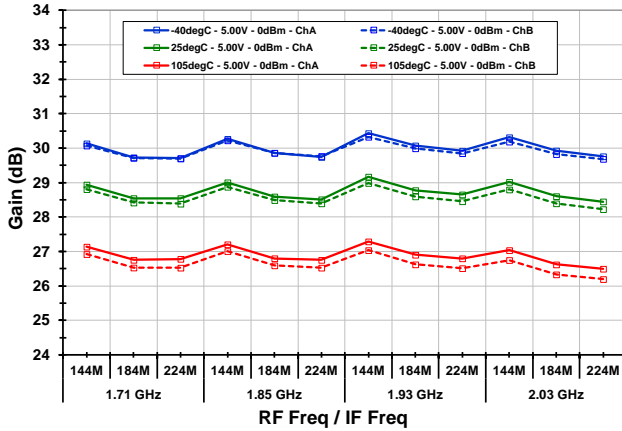

TYPICAL OPERATING CONDITIONS (STD MODE, 184MHz IF)

Unless otherwise noted, the following conditions apply to the 184MHz Typ Ops Graphs:

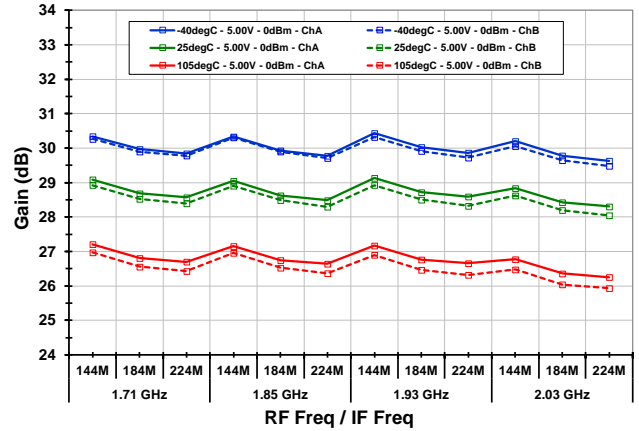

- BOM2 Applications circuit with 184MHz IF Center +/- 40 MHz bandwidth network to provide matching to 100 ohm differential load provided by 2:1 transformer (see page 51)
- Pout ~ +1 dBm
- P_{IN} from -27 to -6dBm (Gain Setting Adjusted to yield Pout ~ +1 dBm without exceeding -6dBm P_{IN})
- Tone Spacing = 800kHz
- Device configured in Standard Mode with Low Side Injection
- T_{CASE} = 25°C, V_{CC} = 5.00 V, LO Power = 0 dBm
- RF Frequency: 1.88GHz
- IF Frequency: 184MHz
- Gain Setting Sweep points: 27dB (G_{MAX})
- Transformer Losses are de-embedded
- Input RF trace Losses are not de-embedded
- Listed Temperatures are Case Temperature (T_C = Case Temperature)
- Where noted, T_A or T_{AMB} = Ambient Temperature

PACKAGE OUTLINE DRAWINGS

The package outline drawings are located at the end of this document and are accessible from the Renesas website (see Ordering Information for POD links). The package information is the most current data available and is subject to change without revision of this document.

F0552 PINOUT

F0552 PIN DESCRIPTION TABLE

Pin	Name	Function
1, 3, 15, 17, 25, 38, 40, 46, 61	VCC	Power Supply. Bypass to GND with capacitors shown in the Typical Application Circuit as close as possible to pin.
2, 4, 6, 12, 14, 16, 27, 37, 39, 42, 43, 48, 56, 59	GND	Ground these pins.
5	RFIN_A	Main Channel RF Input. Internally matched to 50Ω. DO NOT apply DC to these pins
7, 11, 24, 30, 31, 32, 34, 49, 52, 54, 55, 62	NC	No Connection. Not internally connected. OK to connect to VCC, OK to connect to GND
8	TDD_A	Standby control for Channel A. Includes an internal pull-up resistor so leave as NC for Standby mode. Set this pin to low or GND for normal operation.
9	LCmode	Low_Current Mode. Includes an internal pull-up resistor so leave as NC for LC mode. Set this pin to low or GND for STD mode.
10	TDD_B	Standby control for Channel B. Includes an internal pull-up resistor so leave as NC for Standby mode. Set this pin to low or GND for normal operation.
13	RFIN_B	Diversity Channel RF Input. Internally matched to 50Ω
18	B5	Parallel Gain Control Input – MSB. Includes an internal pull-up resistor.
19	B4	Parallel Gain Control Input. Includes an internal pull-up resistor.
20	B3	Parallel Gain Control Input. Includes an internal pull-up resistor.
21	B2	Parallel Gain Control Input. Includes an internal pull-up resistor.
22	B1	Parallel Gain Control Input. Includes an internal pull-up resistor.
23	B0	Parallel Gain Control Input – LSB (1 dB step). Includes an internal pull-up resistor.
26	ISET_B	ChB VGA Icc set: Recommended resistor value = 3.83K
28	IFOUT_B+	Channel B Differential Output +. Pull up to Vcc through an inductor
29	IFOUT_B-	Channel B Differential Output -. Pull up to Vcc through an inductor
33	MX_IF_BiasB	Connect the specified resistor for either Standard mode (41ohm) or LC mode (62ohm) from this pin to ground to set the bias for the Diversity IF amplifier. This is NOT a current set resistor.
35	MX_IFB+	Diversity Mixer Differential IF (+) Output. Connect a pullup inductor from this pin to VCC.
36	MX_IFB-	Diversity Mixer Differential IF (-) Output. Connect a pullup inductor from this pin to VCC.

F0552 PIN DESCRIPTION TABLE (CONTINUED)

41	LO1_ADJ	Connect the specified resistor for either Standard mode (220ohm) or LC mode (240ohm) from this pin to ground to set the LO common buffer Icc.
44	LO_IN	Local Oscillator Input. Connect the LO to this port through the recommended coupling capacitor.
45	LO_IN_RTN	Transformer ground return. Ground this pin.
47	LO2_ADJ	Connect the specified resistor for either Standard mode (1.3K) or LC mode (2.15K) from this pin to ground to set the LO drive buffers Icc.
50	MX_IFA-	Diversity Mixer Differential IF (-) Output. Connect a pullup inductor from this pin to VCC.
51	MX_IFA+	Diversity Mixer Differential IF (+) Output. Connect a pullup inductor from this pin to VCC.
53	MX_IF_BiasA	Connect the specified resistor for either Standard mode (41ohm) or LC mode (62ohm) from this pin to ground to set the bias for the Diversity IF amplifier. This is NOT a current set resistor.
57	IFOUT_A-	Channel A Differential Output -. Pull up to Vcc through an inductor
58	IFOUT_A+	Channel A Differential Output +. Pull up to Vcc through an inductor
60	ISET_A	ChA VGA Icc set: Recommended resistor value = 3.83K
63	A0	Parallel Gain Control Input – LSB (1dB step). Includes an internal pull-up resistor.
64	A1	Parallel Gain Control Input. Includes an internal pull-up resistor.
65	A2	Parallel Gain Control Input. Includes an internal pull-up resistor.
66	A3	Parallel Gain Control Input. Includes an internal pull-up resistor.
67	A4	Parallel Gain Control Input. Includes an internal pull-up resistor.
68	A5	Parallel Gain Control Input – MSB. Includes an internal pull-up resistor.
	— EP	Exposed Pad. Internally connected to GND. Solder this exposed pad to a PCB pad that uses multiple ground vias to provide heat transfer out of the device into the PCB ground planes. These multiple via grounds are also required to achieve the noted RF performance.

F0552 DIGITAL PIN VOLTAGE AND RESISTANCE VALUES

The following table provides open-circuit DC voltage and resistance values referenced to ground for each of the control pins listed.

Pin	Name	DC Voltage (volts)	Pull-up Resistance (ohms)
8	TDD_A	5	50k
9	LC_MODE	5	50k
10	TDD_B	5	50k
18 – 23	B0-B5	5	50k
63 - 68	A0-A5	5	50k

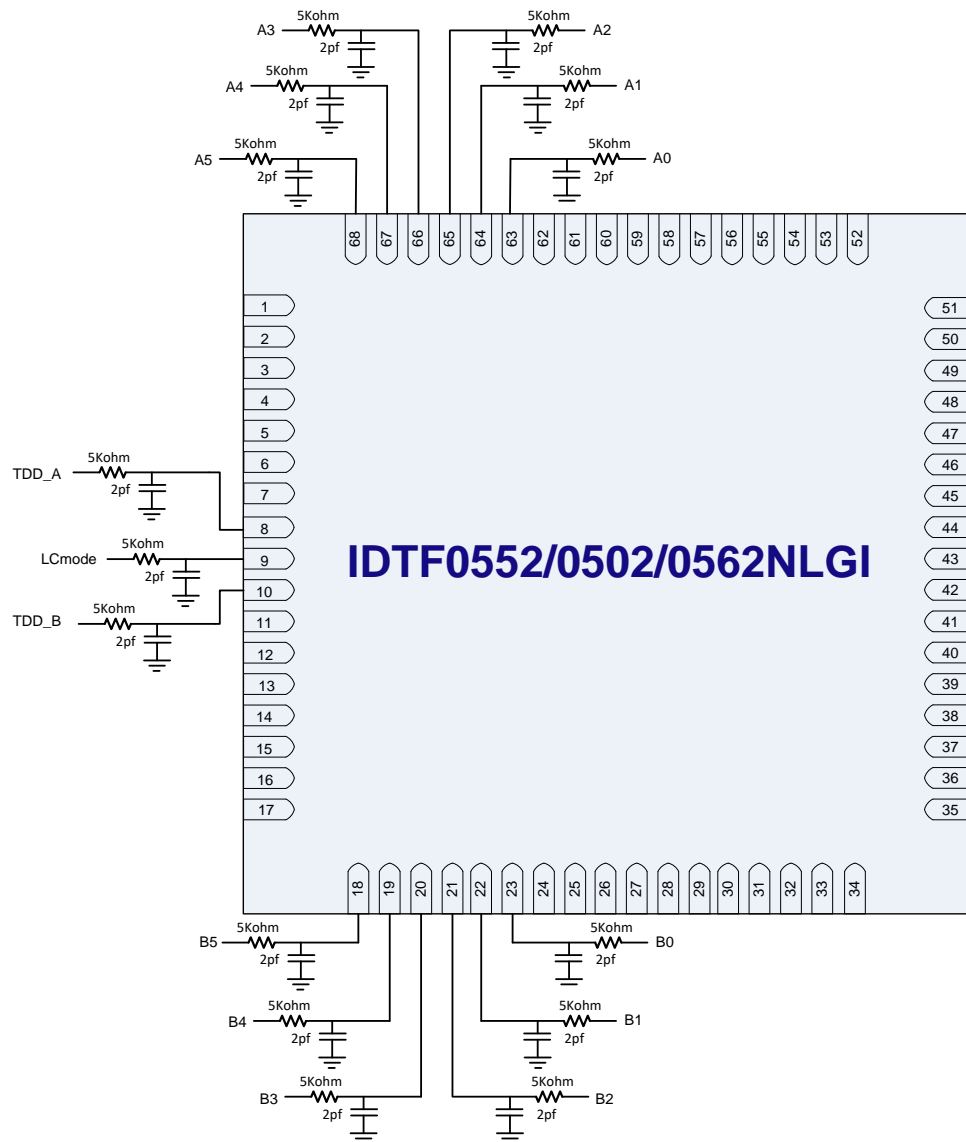

APPLICATIONS INFORMATION

Power Supplies

A common VCC power supply should be used for all pins requiring DC power. All supply pins should be bypassed with external capacitors to minimize noise and fast transients. Supply noise can degrade noise figure and fast transients can trigger ESD clamps and cause them to fail. Supply voltage change or transients should have a slew rate smaller than 1V/20µs. In addition, all control pins should remain at 0V (+/-0.3V) while the supply voltage ramps or while it returns to zero.

Control Pin Interface

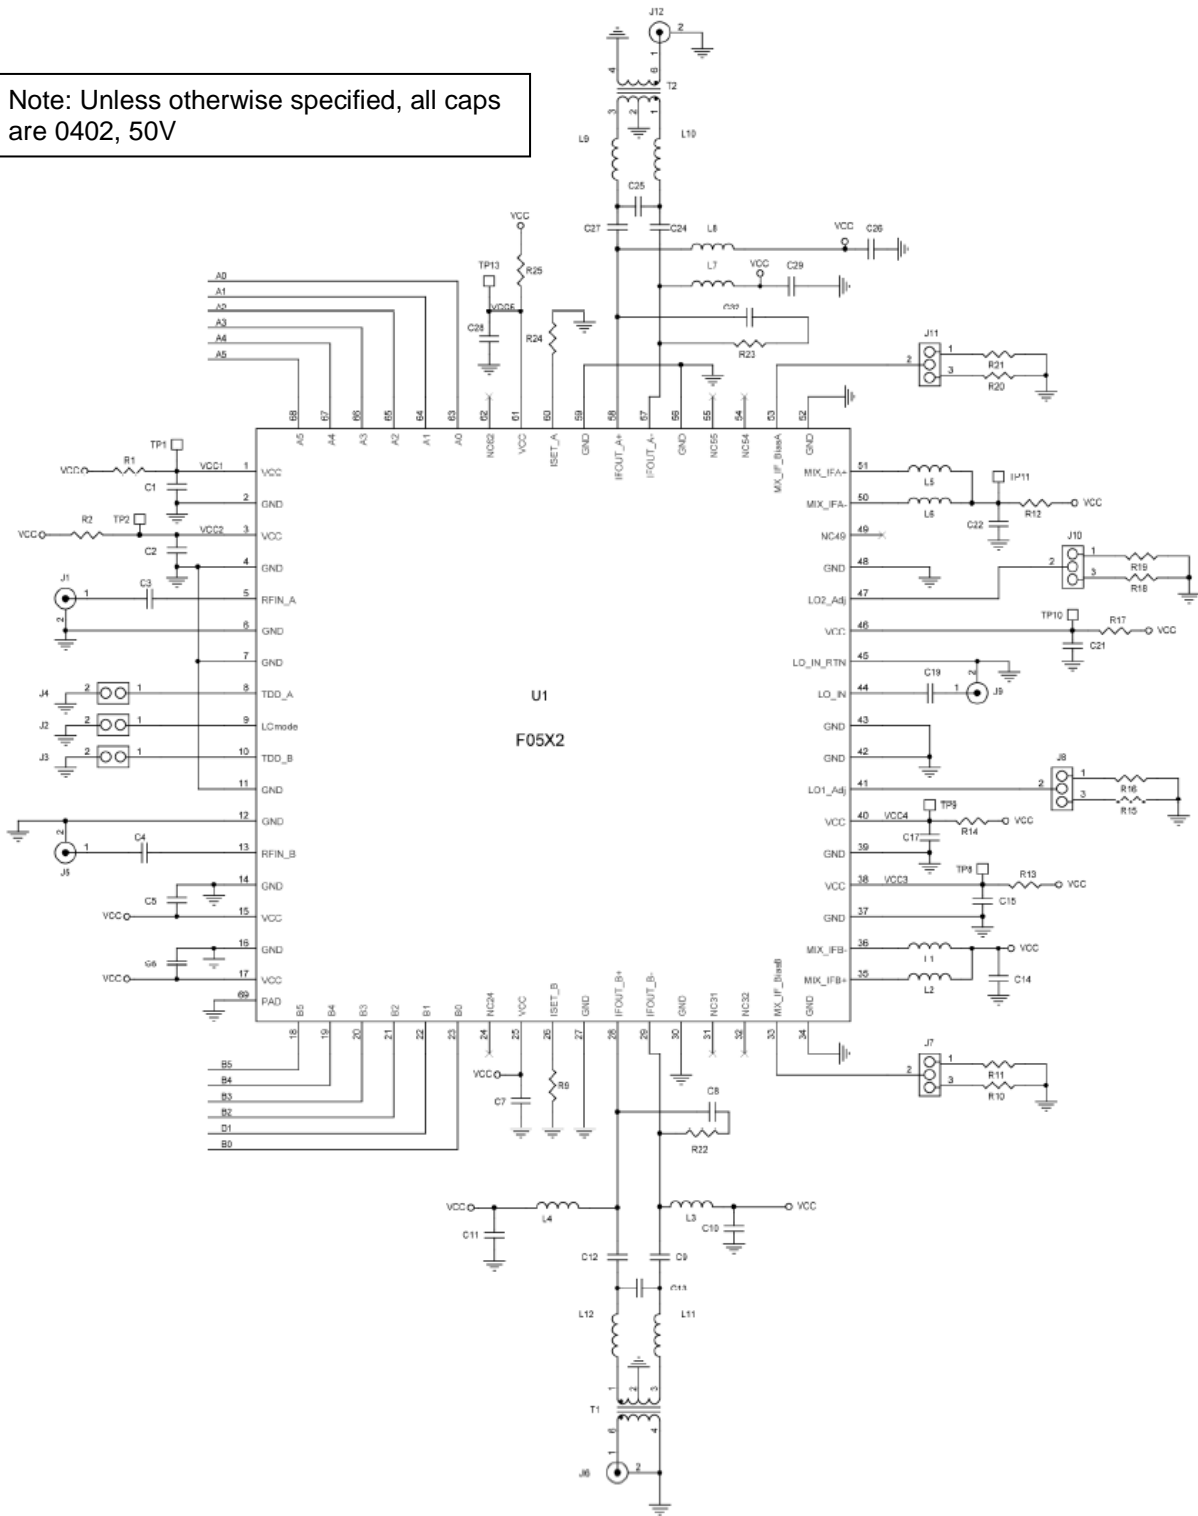

If control signal integrity is a concern and clean signals cannot be guaranteed due to overshoot, undershoot, ringing, etc., provisions for an R-C circuit at the input of each control and data pin is recommended. This applies to pins 8, 9, 10, 18 - 23, and 63 - 68 as shown below.

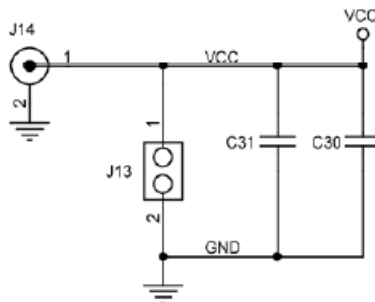

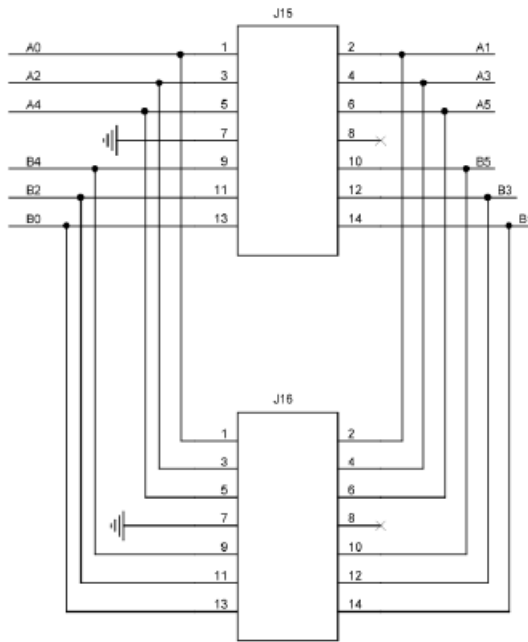

EVKIT AND TYPICAL APPLICATION SCHEMATIC

The following schematic describes the recommended EVkit and applications circuit.

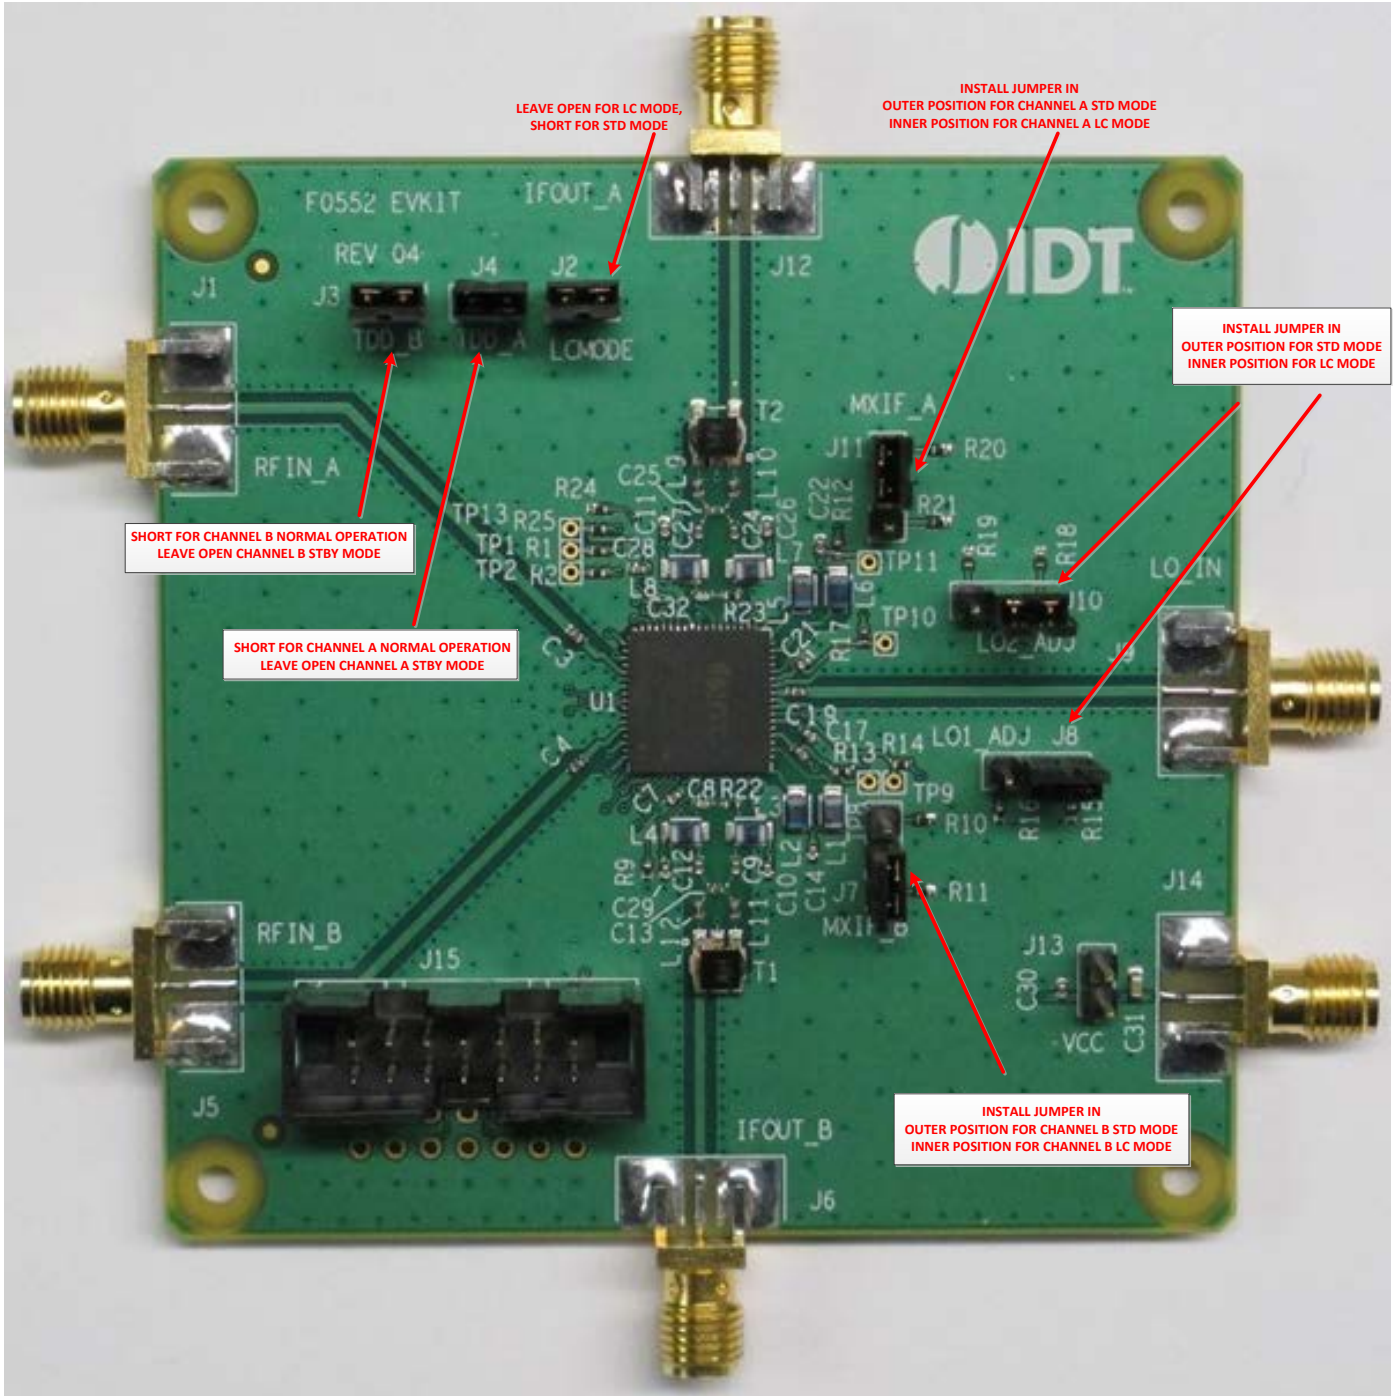

Note: Unless otherwise specified, all caps are 0402, 50V

SCHEMATIC CONTINUED FROM PREVIOUS PAGE

EVKIT PICTURE

F0552 BOM 1 AND 2

Two EV Kit BOMs are included: BOM1 supports the 4:1 output transformation from 200 ohms to 50 ohms used for production test and BOM2 supports the 2:1 output transformation from 200 ohms to 100 ohms used to generate the typical operating curve graphs.

BOM1 includes components for 4:1 output transformation supporting production test (IF center frequency 184MHz)

F0552 BOM For 4:1 IF=184Mhz for Correlation

For the complete list of matching values for IF frequencies other than 184MHz, see the following table.

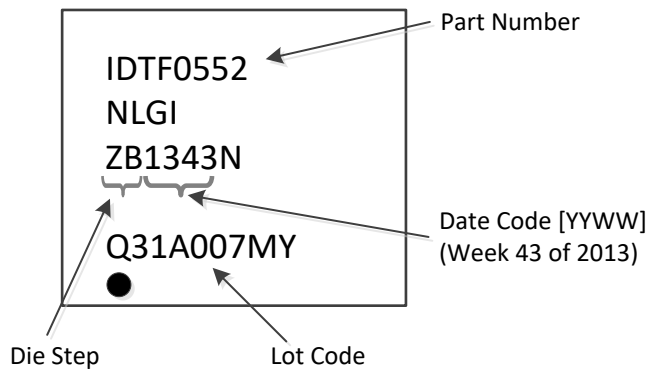

IF BIAS AND OUTPUT MATCHING CIRCUIT AND BOM FOR VARIOUS IFs

IF NETWORK BOM FOR DIFFERENT FREQUENCIES

Item #	Part Reference	Value				Unit
		IF frequency				
		80 (60-100)	138, 184 (98-240)	276 (190-316)	330 (250-410)	
1	C9,12,24,27	75	20	8	6	pF
2	C13,25	11	3	1.2	0.7	pF
3	C8,C32	0.6	0.6	0.6	0.6	pF
4	R23, R22	100	100	100	100	ohm
5	L3,4,7,8	220	150	82	56	nH
6	L9-12	36	30	24	18	nH

TOP MARKINGS

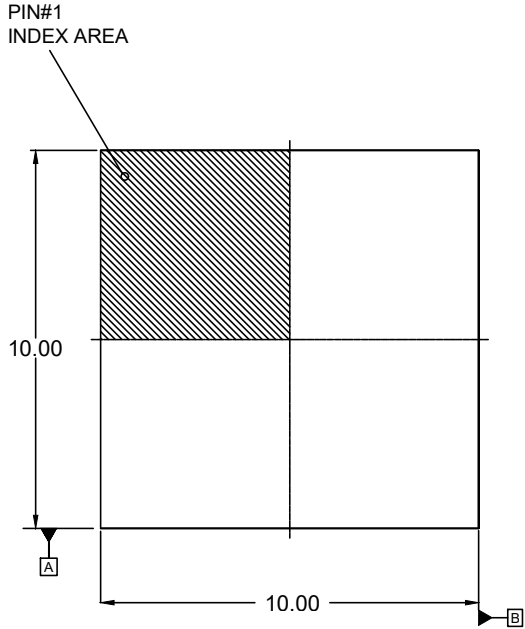

ORDERING INFORMATION

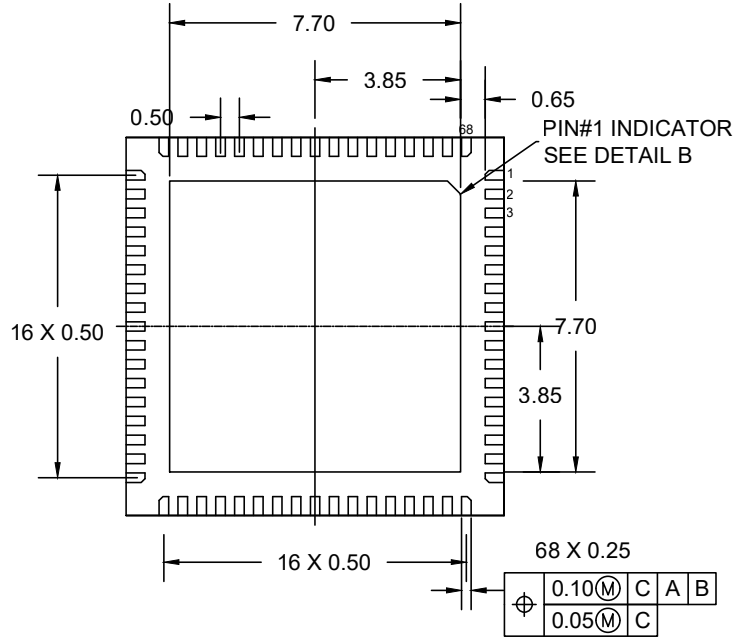

Part Number	Package Description	Carrier Type	Temperature Range
F0552NLGI	68-VFQFPN , 10 x 10 mm	Tape and Reel	-40°C to +85°C
F0552NLGI8		Tray	

REVISION HISTORY

Revision Date	Description
February 9, 2022	Rebranded to Renesas.
January 27, 2014	Initial release.

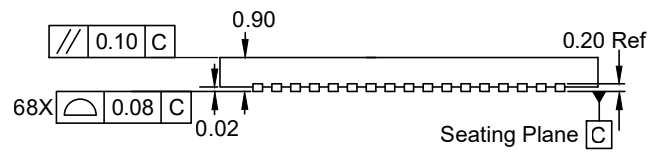

TOP VIEW

BOTTOM VIEW

RECOMMENDED LAND PATTERN DIMENSION

SIDE VIEW

NOTES:

1. All dimension are in mm, angles in degrees.
2. Top down view, as viewed on PC.
3. Land pattern in blue. NSMD land pattern assumed.
4. Land pattern recommendation as per IPC-7351B generic requirement for surface mount design and land pattern.

IMPORTANT NOTICE AND DISCLAIMER

RENESAS ELECTRONICS CORPORATION AND ITS SUBSIDIARIES (“RENESAS”) PROVIDES TECHNICAL SPECIFICATIONS AND RELIABILITY DATA (INCLUDING DATASHEETS), DESIGN RESOURCES (INCLUDING REFERENCE DESIGNS), APPLICATION OR OTHER DESIGN ADVICE, WEB TOOLS, SAFETY INFORMATION, AND OTHER RESOURCES “AS IS” AND WITH ALL FAULTS, AND DISCLAIMS ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, OR NON-INFRINGEMENT OF THIRD PARTY INTELLECTUAL PROPERTY RIGHTS.

These resources are intended for developers skilled in the art designing with Renesas products. You are solely responsible for (1) selecting the appropriate products for your application, (2) designing, validating, and testing your application, and (3) ensuring your application meets applicable standards, and any other safety, security, or other requirements. These resources are subject to change without notice. Renesas grants you permission to use these resources only for development of an application that uses Renesas products. Other reproduction or use of these resources is strictly prohibited. No license is granted to any other Renesas intellectual property or to any third party intellectual property. Renesas disclaims responsibility for, and you will fully indemnify Renesas and its representatives against, any claims, damages, costs, losses, or liabilities arising out of your use of these resources. Renesas' products are provided only subject to Renesas' Terms and Conditions of Sale or other applicable terms agreed to in writing. No use of any Renesas resources expands or otherwise alters any applicable warranties or warranty disclaimers for these products.
